

ASAP Automation

SOFTWARE & AUTOMATION TECHNOLOGY

Our Vision

ASAP Automation enjoys using advanced technologies to help businesses execute their strategic goals. Success through the control of material flow, information flow, and operational procedures can yield huge competitive advantages. Our integrated SCE software and material handling systems reduce the total cost of order fulfillment and the cycle time for the end user to receive their product. We greatly enjoy what we do and feel that our efforts are instrumental in making businesses stronger and more competitive in world markets.

Technology Expertise

ASAP Automation is one of the few companies to integrate SCE Software with advanced automation technologies. This allows "real time" feedback from conveyor carton routing and storage tools to the WMS allowing the re-direction of your operators as necessary. We fully utilize Web-services for XML based business connectivity. Our software has the ability to be deployed in ASP (Application Service Provider) modules for cost reduction. We have certified interfaces with the major Tier 1 and Mid-Tier ERP providers for quick implementation.

ASAP's "Supply Chain Services"

ASAP services for SCM consist of Engineering Studies & Software such as:

- Warehouse Design & Consulting
- Design of Storage Systems, Material Handling Equipments & IT System
- 3 D Layout / Simulation of the Facility
- Radio Frequency (RF) / Bar-coding Systems
- Warehouse Management System (WMS)
- Customized Software Development related to SCM

Exacta™ Suite of Products:

- Exacta™ WMS, a Warehouse Management System Available in Paper Based & Paperless Modes ;
- Exacta™ OMS, a real time visibility to order status;
- Exacta™ RF, a modular radio frequency and bar code solution package;
- Exacta™ Pack, a modular finished goods packaging program;
- Exacta™ Light Directed Picking & Exacta™ Carousel;
- Exacta™ Sort, a modular automated sorting package;

ASAP can ensure the final system will meet your business objectives.

ASAP's "Automation Services"

ASAP services for Automation consist of:

- Industry's Largest Selection of Conveyor and Conveying Components
- Pick & Place Systems
- Precise Powder Deeding Units
- Batch Weighing Systems
- Customized Process Equipments with Automation in Food & other related Process Industries
- Custom Designed Industrial / Processing Industry's Turnkey Projects

Conveyor Systems:

- **Horizontal Conveyors:** Slider Bed, Roller Bed, Live Roller, Chain Roller and Gravity Conveyors, Accumulation Conveyors
- **Sortation Conveyors:** High Speed Sortation, Horizontal Belt Sortation
- **Incline Conveyors:** Cleated Belt, Floor to Floor Slider Bed, Floor to Floor Roller Bed Conveyors
- **Portable Conveyors:** Low Profile Portable Parts Conveyor, Piano Hinge Parts

The proven ASAP team is fully capable of designing and producing systems to meet your material handling needs. System engineers at ASAP are creative, experienced professionals who provide the technical assistance needed to get the job done right.

ASAP's "Controls Services"

ASAP services for Controls consist of:

- PLC Based Automation
- Drive Interface & PC Based Automation (HMI)
- Process Automation & Instrumentation
- Low Voltage Control Systems
- Rectifiers, Power Solutions & Transporter System

ASAP Controls offers the entire spectrum of services required for your controls projects from Design, Implementation, Training & Support.

ASAP Controls systems provide excellent integration of robotics in a variety of applications.

Graphical 3D views make fast identification and system diagnostics.

Technology Experience:

- Conveying Systems
- Carousels (Horizontal & Vertical)
- Crane Automation system
- Weighing Systems
- Process Automation System
- Retrofitting the system
- Radio frequency system

ASAP Automation is a **systems integrator** and **software development company** dedicated to consulting, design, integration and implementation of world-class distribution centers / production plants around the world. We combine our **engineering experience** with **state-of-the-art industrial automation, controls and information systems** to provide cost effective solutions for our customers.
